MAGNETIC DISK SUBSTRATES FORMED OF
CERAMIC-METAL MATRIX COMPOSITES WITH OR WITHOUT
METAL CLADDING

SUBSTRATS DE DISQUES MAGNETIQUES CONSTITUES DE
COMPOSITES EN CERAMIQUE- MATRICE METALLIQUE
AVEC OU SANS PLACAGE METALLIQUE

ABSTRACT:

A rigid disk substrate for a magnetic recording disk is formed of a ceramicmetal matrix composite. A metal-cladding may be included around the ceramicmetal matrix composite to form a sandwich structure. The ceramic-metal matrix composite has a composition ranging from approximately 1 to 40 weight % of ceramic and 60 to 99 weight % of metal matrix. The metal matrix material and the metal cladding material are aluminum or an aluminum alloy.

APPLICATION PRIORITY DATA:

Application No.	Country	Date
014,882	US	Feb. 13, 1987

ABSTRACT:

ABSTRACT

An optical memory storage media is described, e.g. a compact disc. A method of preparing the media (e.g. discs) is also taught. The storage media is formed from a substrate material having tightly bonded to the surface a highly reflective soft metal alloy formed of, for example, an alloy including at least five percent by weight of each of at least two metals selected from the group consisting of cadmium, indium, tin, antimony, lead, bismuth, magnesium, copper, aluminum, zinc and silver.
